

# **What can you do with Linux?**

CHUGALUG 2014-09-23

BLFoley

# Two classes of user

## The Consumer

Wants things to “just work.”  
Blissful about a black box.

## Part One

...except not really

## The Tinker

Needs or wants to understand  
or change how things work.

## Part Two

...except not really

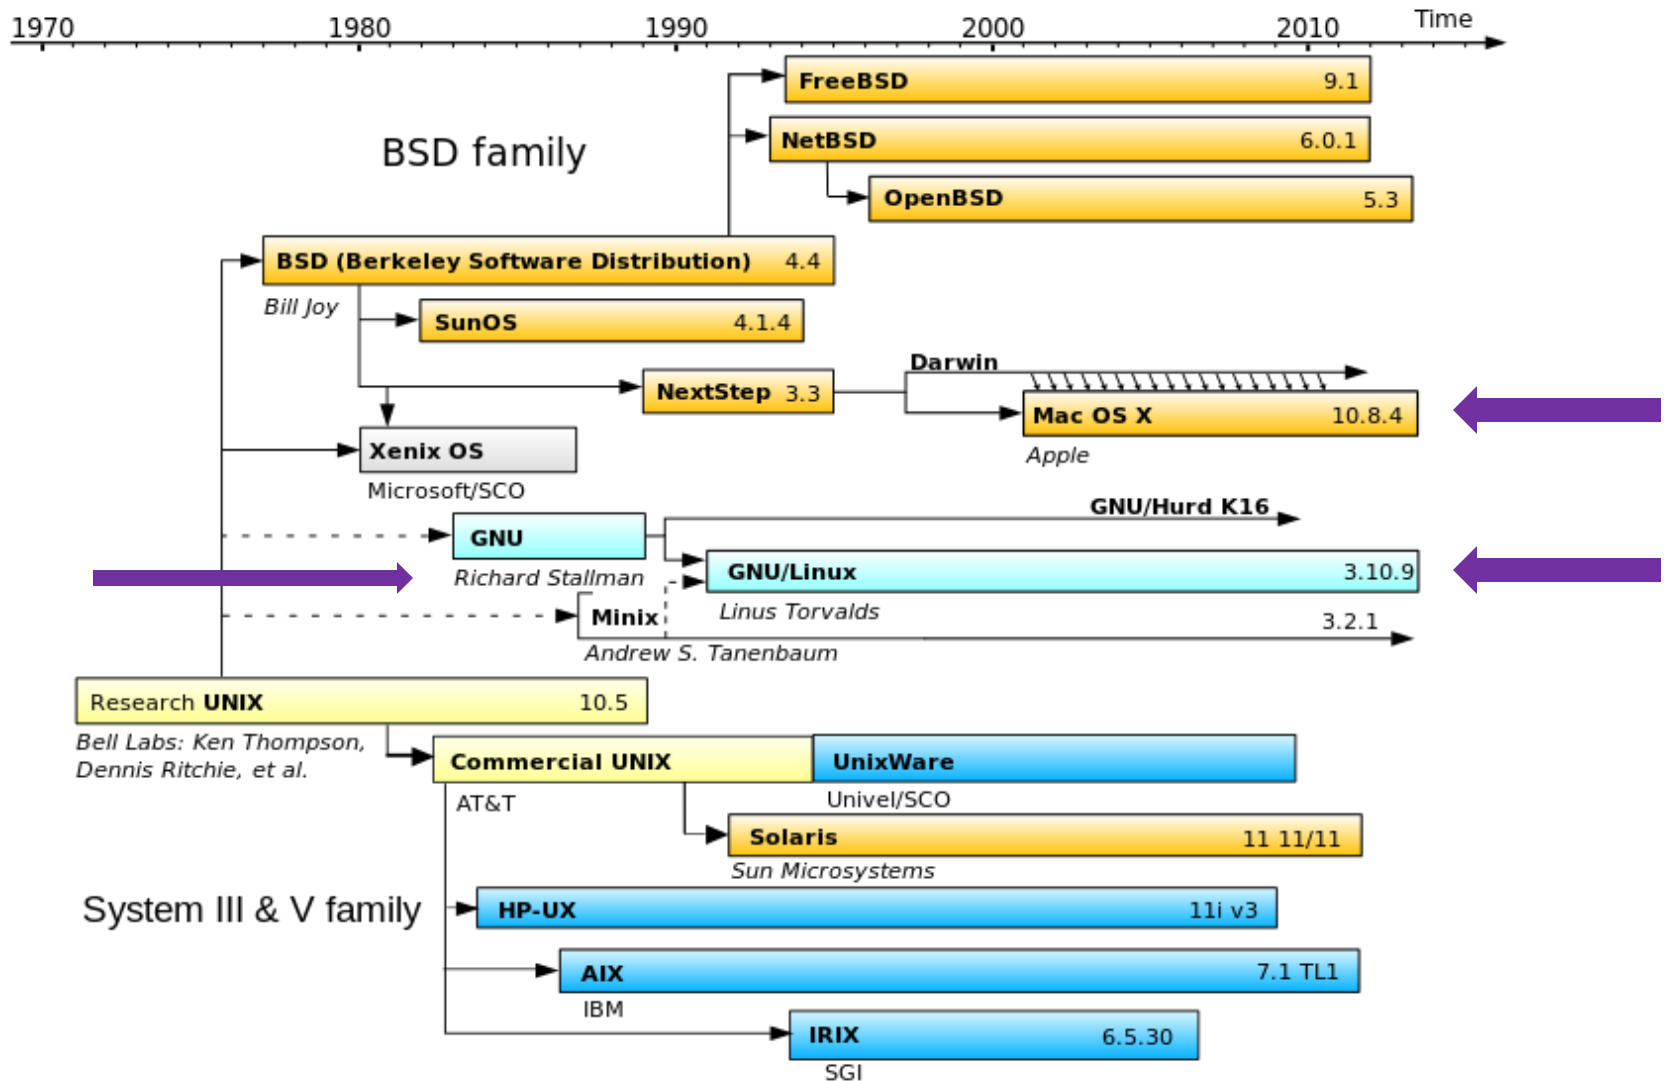

Note that this is independent of experience.

Linux is for everyone.

# What is Linux?

- Strictly speaking, a kernel, but most folks mean:
- Operating system
  - Mac OS-X, Windows 7, iOS and Android are others
  - Android is a variant of Linux
- Free and Open Source Software (FOSS)
  - Free to use, copy, study, modify
- Used in many places
  - Personal computers
  - Embedded systems (phone, router, game consoles, etc.)
  - Servers (websites, cloud, etc.)
  - Supercomputers (>95% in 2013)

# Linux's Family Tree

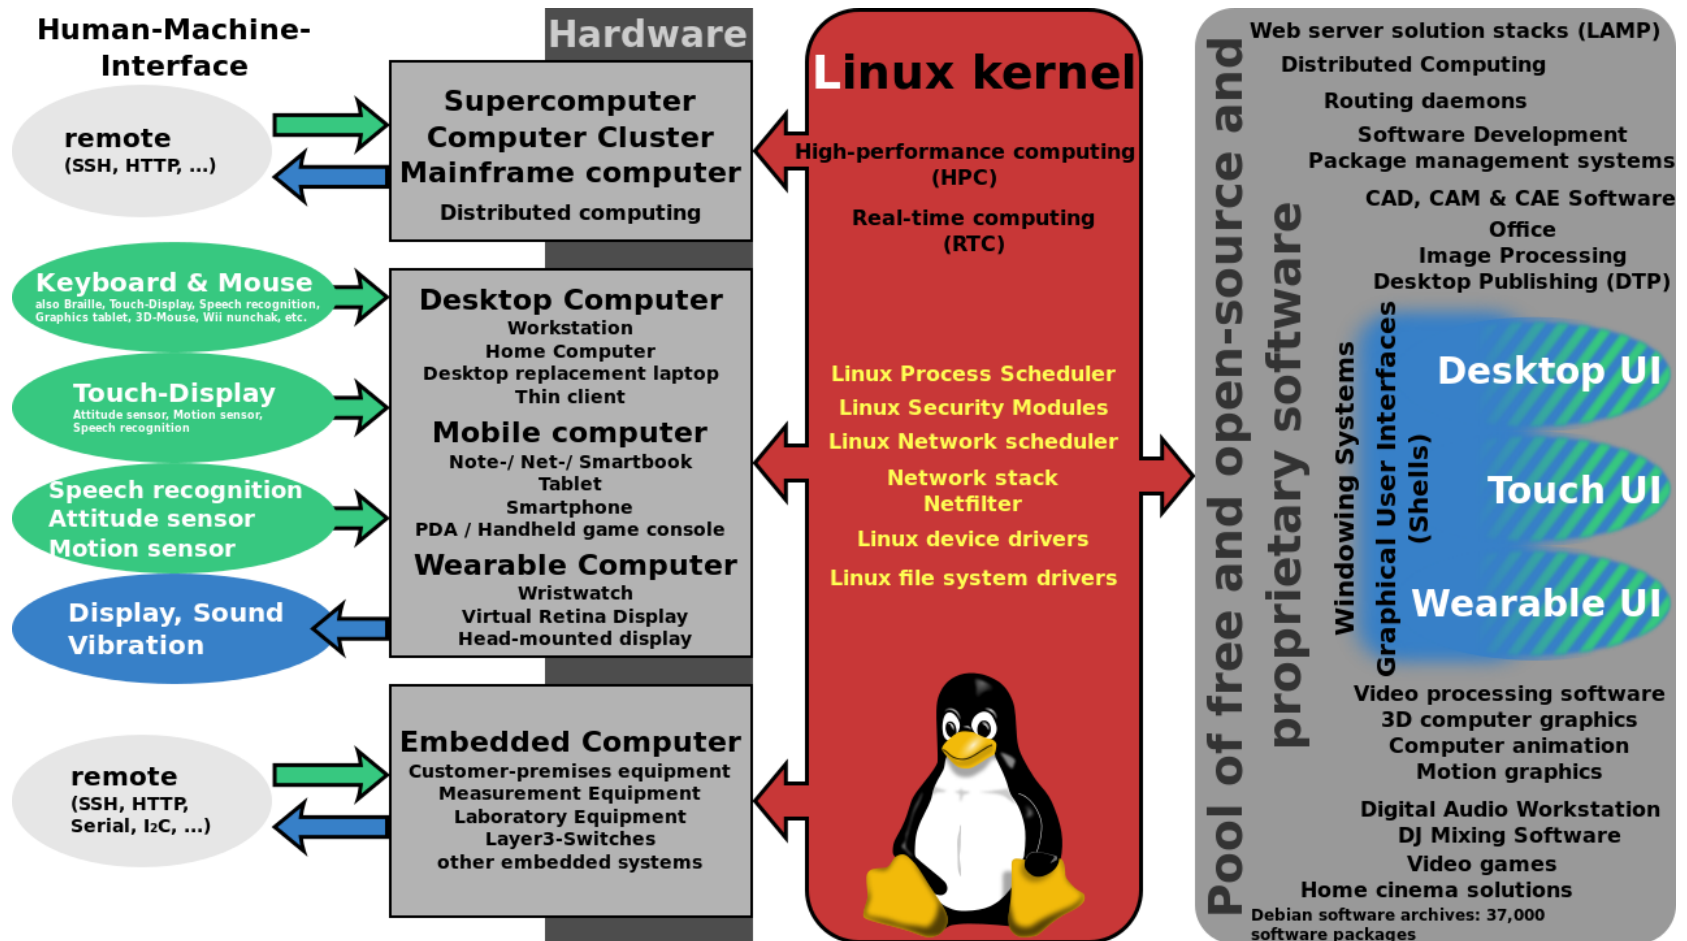

# Richard Stallman is coming to UGA

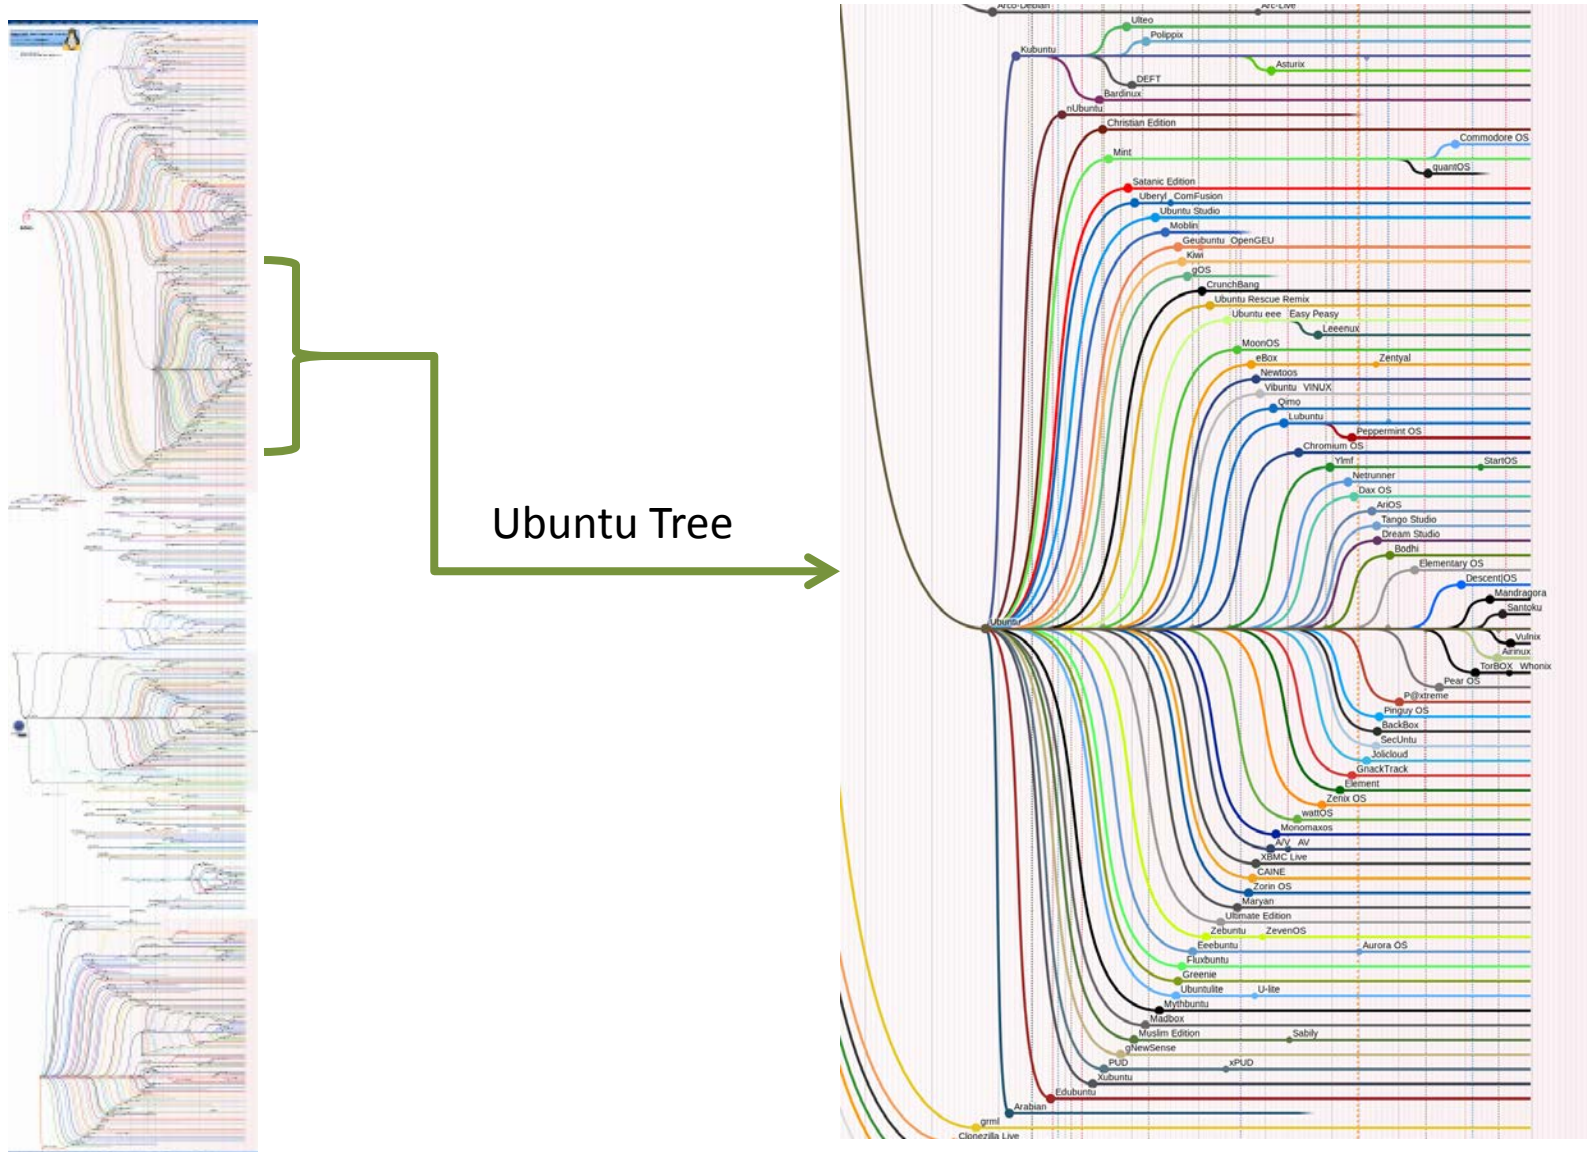

# For the complete newbie

- Must choose distribution

[http://en.wikipedia.org/wiki/File:Linux\\_kernel\\_ubiquity.svg](http://en.wikipedia.org/wiki/File:Linux_kernel_ubiquity.svg)

# There are many distros

[http://en.wikipedia.org/wiki/File:Linux\\_Distribution\\_Timeline.svg](http://en.wikipedia.org/wiki/File:Linux_Distribution_Timeline.svg)

# Choose based on needs

- For new and/or consumer users, perhaps:
  - Ubuntu, Linux Mint, Linux Deepin\*

<http://www.linux.com/news/software/applications/775873-the-best-linux-distribution-for-new-users>

- Advanced consumers, perhaps:
  - Debian, CentOS, Suse
- Tinkers, perhaps:
  - Arch, Slackware
- See, for example, [distrowatch.com](http://distrowatch.com)

\* Not stable for virtual machines

# Consider virtual machines

- For example [virtualbox.org](https://www.virtualbox.org)
- Try out new distros
- Test changes before applying to your main computer
- Play – make changes – with impunity
- Test networking setups, etc
- Try programs in multiple OS environments

# Linux for the Consumer

- Primary operating system
  - Stable, much less concern about viruses
- Secondary operating system
  - Breathe new life into an old PC
- Many user-space applications:
  - Graphics: gimp, inkscape, kdenlive
  - Audio: audacity, rosegarden
  - Replace your TiVo or DVR: mythtv
  - Office productivity: open office, libre office
  - Browse the web, listen to music, watch videos...
  - Geographic Information System: qgis
  - Math, statistics, typesetting, etc., etc., etc.

# Linux for the Tinker

- Set up a media streaming / file service at home
- Revive a \*really\* old PC as a thin client
- Reprogram your router
- Learn to program
- Write drivers
- Hack on the kernel
- Machine learning
- Scientific computing
- Web server
- Play with Raspberry Pi and similar
- Pretty much anything
